

Designing a Plan for the Successful Use of Real-Time Technologies [Overview]

With increasing pressures in healthcare, leveraging Real-Time Technologies is becoming a necessity.

Organizations need to understand the opportunities that come with implementing these technologies, and how they can achieve expected value and quantify a predictable return on investment.

With an unmatched experience of over 300 real-time technology projects and a vendor-neutral approach, Infinite Leap will help you discover and articulate the needs of your organization, patients, and staff, develop a strategy to meet those objectives, and design a comprehensive plan to make them a reality.

The Real-Time Technologies Solution Design allows leadership to review and approve a well-researched and supported plan and provides the guidelines for success while reducing risks, and realistically setting expectations on costs, timelines, and results.

We've identified and planned for more than 100 unique use cases that leverage Real-Time Technologies, so we can bring ideas that you possibly haven't even thought of yet.

Our Rapid 90-Day Solution Design Process includes:

1) Identification of Needs

Conversations with key stakeholders to identify and document wants, needs, and opportunities and correlate how Real-Time Technologies and associated process changes can help.

2) Use Case Prioritization

Prioritization of use cases to generate the most important results in the shortest time frame.

3) Business Model Creation

Creating a detailed business model, including budgetary cost and value estimates, to set realistic expectations for the required investment and potential return.

4) Deployment Modeling

Development of a multi-year deployment model that achieves value rapidly and matches investments to returns as best as possible.

5) Governance and Operational Models

Recommendations towards creating successful project governance and operational models to ensure a high adoption and ongoing success of the system.

6) Identification of Success Criteria

Identification of baseline performance, objectives, and metrics used to evaluate the success of the initiative.

7) Technical Requirements Development

Defining technical requirements and providing evidence-based recommendations for technologies and products.

8) Executive Presentation

Delivery of executive level presentations to convey proposed plan accurately and concisely while proactively addressing potential questions to allow faster approvals and funding.

To successfully deploy real-time technologies, you need to begin with a great solution design. Infinite Leap can provide it.
